Mezzanines

Increase Floor Space

Multi-Purpose Mezzanine

Increase your manufacturing or warehousing capacity fast. Double your floorspace without incurring moving, renovation or new construction costs.

Increase your manufacturing capacity fast with a high-performance Cogan mezzanine. Whether you

need a little or a lot more floor space, Cogan has the perfect mezzanine solution to fit your warehouse, your timing, and your budget. Our engineers will work closely with you to transform unused vertical space into a profitable storage area. Just send us your additional space requirements and we will return an AutoCAD drawing showing precisely how your mezzanine will be configured within the existing layout of your warehouse, matching its exact height, area and load requirements.

Quality, strength, efficiency to keep your process running smoothly. From conception to installation, a Cogan mezzanine is innovation at its best.

Don't be afraid to challenge a Cogan mezzanine! Constant movement and vibration can be tough

on a structure, but a conveyor support mezzanine will live up to the rigorous pace of your work environment. When high-speed conveyors move over 40,000 packages a day, you need a support structure that won't flinch under pressure. Not only will a Cogan mezzanine double your floor space, the wide span design will increase visibility, functionality and safety for both your workers and your equipment. Convert your unused space into a profitable conveyor support mezzanine.

Conveyor Support Mezzanine

Multi-Level Mezzanine

Install a multi-level mezzanine and maximize your cubic area for a greater ROI than any other growth alternative.

In today's reality, effective warehouse management is an essential business skill. Between unexpected logistical issues, product handling and distribution, maintaining a productive operation is an ongoing challenge. Increase efficiency with a Cogan multilevel mezzanine. Unlike new construction, which qualifies as a building modification, a mezzanine is a piece of capital equipment. You benefit from a full-fledged storage platform without the high costs associated with expansion or moving to a new facility.

Cogan industrial catwalk mezzanines improve in-plant circulation and provide secure work platforms for overhead maintenance.

Safely access and direct traffic around equipment with a Cogan industrial catwalk mezzanine.

Elaborate conveyor and sortation systems can leave a large footprint on your production floor. Built to work around your existing floorplan, Cogan catwalks create walkway space above major process areas. Important equipment can be worked on from a solid surface that won't buckle or sway when in use. Warehouse racks, high shelving and attic spaces can also be reached with ease. Your employees will remain safe when working at heights.

Online Distribution

Mezzanine

Stock and ship a massive amount of inventory quickly and efficiently. Cogan multi-level mezzanines are designed for high volume.

In today's online marketplace, vendors must offer a large selection of products to remain

competitive. With a world of merchandise just a click away, shoppers expect to find exactly what they want, at the best price and with the fastest delivery. For the seller, stocking, picking, and shipping these items is an enormous feat. Speed and organization are key. The addition of a mezzanine can easily double the available workspace in your distribution center. Seamlessly integrate shelving, racking, and conveyor systems to move your inventory quickly and efficiently.

Equipment Platform Mezzanine

Boost safety and productivity on your production floor with a Cogan equipment platform mezzanine.

By adding more convenient access points to critical functions, a mezzanine can boost safety and efficiency on your production floor. Designed to integrate seamlessly with your existing operations, an equipment platform mezzanine provides secure passageways over machinery. This is ideal for equipment that must be accessed from above, such as heating and cooling equipment, compressors, and piping or ventilation units. Necessary maintenance can be completed without disrupting the primary work area below.

In-Plant Office

Mezzanine

Create a fully integrated in-plant office above your production floor. Just another way Cogan mezzanines make your space work for you.

In a busy warehouse setting, office space must often be sacrificed in favor of larger production

zones or storage areas. Paperwork accumulates and critical administrative tasks fall to the wayside without a designated work area. By creating a fully-integrated in-plant office above your production floor, a Cogan mezzanine will effectively put an end to these limitations. Create ample room for computer stations, filing cabinets and other office equipment. Your elevated workspace remains in proximity relevant operations without compromising production efficiency.

Parts Inventory

Mezzanine

Maintaining an orderly Parts Department can be a daunting task. Install a mezzanine and create space for shelving, computer stations and other equipment.

Lack of proper inventory management can lead to overspending or even worse, failure to supply

service departments with sufficient materials needed to fill orders and make repairs. Install a Cogan mezzanine and create plenty of space for shelving units, computer stations and other equipment required for accurate inventory control. Increased square footage also facilitates in-plant traffic circulation and item accessibility. Easy flow patterns through clearly marked inventory bays work to significantly boost speed and reduce pick costs.

Train Maintenance

Mezzanine

Efficient public transport is the backbone of every major city. Keep transit fleets safe, clean and on schedule with a train maintenance mezzanine.

A well-run maintenance facility is critical to ensure public rail systems remain safe and reliable.

To complete routine maintenance, trains must be accessible from both above and below. For this to be done safely, catwalk-style mezzanines are designed to run along each side of the indoor track. This provides overhead access without disrupting the activity below. Secure 3-rail handrail and sliding gates ensure safety, while a connecting staircase allows for easy circulation on all sides of the train. Repairs are finished on schedule and trains dispatched in time for the next rush hour.

Standard Colors

Standard colors are applied to all products and are automatically included in the material price on your quote. Unless otherwise specified, all standard colors are powder-coated for a durable, long-lasting and maintenance-free paint finish.
